

PRE-WET SYSTEM

FOR **Striker**™ STAINLESS STEEL HOPPER SPREADERS

USE LESS SALT AND ACCELERATE MELTING

The new WESTERN® pre-wet system accessory allows the operator to pre-wet material with a brine solution just before it hits the spinner. This provides two distinct advantages over dry application. Pre-wetting salt begins a chemical reaction in the salt which accelerates melting. Pre-wet granules also bounce less when hitting the pavement for greater material control. Studies have proven application rates can be reduced by 20%-30% when pre-wetting salt with liquids. Get more jobs done faster, saving time and money.

- Available for all Striker™ spreader models
- 25 and 50 gallon poly tank capacities
- 1.5 cu yd, 2.0 cu yd and 3.0 cu yd models can accept up to (4) 25 gallon tanks
- 4.5 cu yd and 6.0 cu yd models can accept up to (4) 50 or 25 gallon tanks

- Corrosion-resistant protected enclosure for pump, electronics and valves

TWO CONTROL OPTIONS

EXISTING CONTROLS

The popular electric Striker hopper spreader control (shown)* already includes a pre-wet accessory button which provides simple on/off operation, allowing the operator to choose when to apply brine while spreading. The flow rate is set manually using the valve in the pump housing.

*On gas and hydraulic models, the on/off switch is incorporated into the master accessory harness control panel.

ADDITIONAL IN-CAB CONTROL OPTION

For operators who want additional flow control from inside the cab, a separate in-cab control option is available, featuring a flow control dial and warning lights that alert the operator of a clog, or if the tanks are empty.

FLEETFLEX
ELECTRICAL SYSTEM

Now built to give you more control at your fingertips, the pre-wet system is designed with FLEET FLEX technology for easy interchange between electric hopper spreaders.

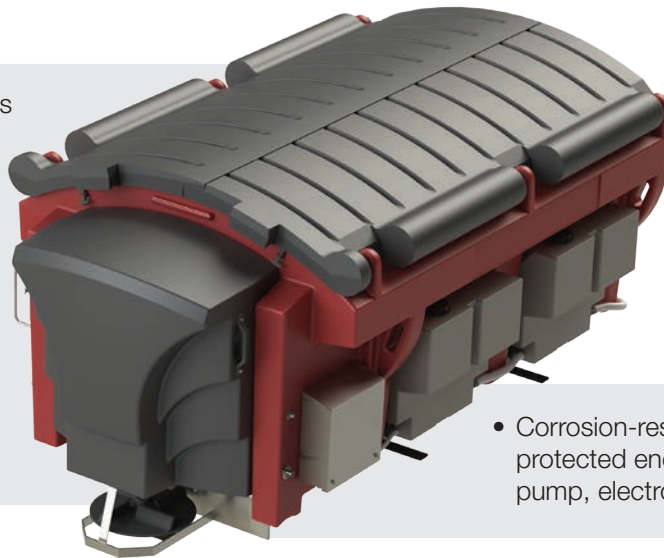

PRE-WET SYSTEM

FOR *Tornado* HOPPER SPREADERS

USE LESS SALT AND ACCELERATE MELTING

The new WESTERN® pre-wet system accessory allows the operator to pre-wet material with a brine solution just before it hits the spinner. This provides two distinct advantages over dry application. Pre-wetting salt begins a chemical reaction in the salt which accelerates melting. Pre-wet granules also bounce less when hitting the pavement for greater material control. Studies have proven application rates can be reduced by 20%-30% when pre-wetting salt with liquids. Get more jobs done faster, saving time and money.

- Available for all Tornado™ models manufactured after Feb 2016
- With the purchase of an additional adapter kit, any Tornado model manufactured after 2009 can accept the pre-wet system
- 25 gallon poly tank capacities
- 1.5 cu yd, 1.8 cu yd and 2.5 cu yd models can accept up to (4) 25 gallon tanks

- Corrosion-resistant protected enclosure for pump, electronics and valves

TWO CONTROL OPTIONS

EXISTING CONTROLS

The new electric Tornado hopper spreader control (shown) includes a new pre-wet accessory button which provides simple on/off operation, allowing the operator to choose when to apply brine while spreading. The flow rate is set manually using the valve in the pump housing.

ADDITIONAL IN-CAB CONTROL OPTION

For operators who want additional flow control from inside the cab, a separate in-cab control option is available, featuring a flow control dial and warning lights that alert the operator of a clog, or if the tanks are empty.

FLEETFLEX ELECTRICAL SYSTEM

Now built to give you more control at your fingertips, the pre-wet system is designed with FLEET FLEX technology for easy interchange between electric hopper spreaders.
